EDUCATION

University of California, Los Angeles

Los Angeles, CA

B.S. in Computer Science, Regents Scholar (top 1.5%)

Expected: Dec 2026

- Relevant Coursework: Operating Systems, Data Structures & Algorithms, Computer Networks, Computer Security

TECHNICAL SKILLS

Languages: Python, C/C++, Java, JavaScript/TypeScript, SQL

Frameworks: React Native (Expo), React, Next.js, Express.js, PyTorch, OpenCV

Databases & Tools: PostgreSQL, MySQL, Supabase, Docker, Git, GitHub Actions

AWS: CDK, Lambda, API Gateway, DynamoDB, Step Functions, IAM/SigV4, S3, Route53, ACM, Cloudwatch

EXPERIENCE

Amazon Web Services (AWS)

Jun 2026 – Sep 2026

Software Engineer Intern, AWS Core Networking Infra

Seattle, WA

- Designed and shipped a multi-tenant network automation platform supporting **5+** internal teams and **100+** AWS accounts, replacing privileged infrastructure access with self-service network operations governed by SSO/IAM
- Eliminated direct AWS account access for partner engineers across 5 production environments by building a fault-isolated API layer that decoupled authentication from the core networking service
- Cut p99 API latency by **33%** (300 → 200 ms) and eliminated **95%+** of DynamoDB scan overhead by introducing Lambda Provisioned Concurrency and redesigning access patterns around composite GSIs

UCLA Regents Scholar Society

Feb 2025 – Mar 2026

Software Engineer Intern

Los Angeles, CA

- Increased event attendance **27%** across 2 UCLA organizations and **100+** students by building and launching a full-stack event platform processing **1K+** RSVPs and automating discovery, reminders, and member workflows
- Architected core platform workflows for a 12-person cross-functional team by translating 70+ user interviews into 4 prioritized features, built with React, Node.js, and PostgreSQL
- Eliminated **\$100+** in recurring reconciliation discrepancies and reduced event administration by 10+ hours/month by replacing fragmented spreadsheets with centralized RSVP and expense workflows

California Institute of Technology

Nov 2023 – Jun 2024

Data Science Intern

Pasadena, CA

- Linked weather anomalies to dissolved oxygen variability, supporting team's theory via correlation analysis
- Surfaced seasonal trends and anomalies across 10+ years of USGS aquatic and weather data by building a Python ETL pipeline and time-series/heatmap/scatter visualizations

PROJECTS

Bruin Dining Companion | *React Native, PostgreSQL, Supabase*

2025 – Present

- Cut meal-selection time by **60%** for UCLA students with dietary restrictions by building a mobile app that aggregates dining menus and filters dishes against personalized allergen and dietary profiles
- Reduced stale-menu and synchronization errors by **80%** by implementing local-first state, optimistic updates, background synchronization, and retry-based recovery for unreliable mobile connections
- Delivered personalized menu filtering for **200+ daily dishes** by modeling hierarchical dietary restrictions in PostgreSQL and enforcing per-user access with Supabase row-level security

Asset Scanner (CV Safety Classification) | *Python, OpenCV, Node.js, Next.js, MongoDB*

Oct 2025 – Dec 2025

- Automated maturity screening for online media by building a computer vision pipeline that flags mature content and assigns safety categories, achieving **92% precision** while reducing manual review by **80%**
- Reduced classification errors **30%** over a single-model baseline by combining ShieldGemma 2 with OpenCV preprocessing, confidence thresholding, and ensemble inference
- Built and evaluated a **5,000+ image** benchmark to compare model variants, tune classification thresholds, and validate precision across maturity categories
